

Epoxy filter for MG units

Step 1 → The **micro filter** cleans the polluted air from particles.

Step 2 → A chemical process in the **gas filter** stage one adsorbs gases in activated carbon media.
Activated impregnated carbon in **stage two** oxidises the amides.

Step 3 → The **dust filter** cleans the air from gas filter particles.

Step 4 → The **cleaned air** leaves the filter unit with a small amount of water.
